DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I (claims 1-4) in the reply filed on 10/2/06 is acknowledged.

Claims 5 thru 25 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 10/2/06.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1 thru 4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is not clear whether the "plurality of gates" is referring to gates in the multiplexer or gates in a separate structure. It is further unclear whether the plurality of clock signals or the selected clock signal toggle the plurality of gates.

The limitation "internal temperature" is indefinite because it does not state what internal temperature the thermal sensing circuitry is monitoring. Appropriate clarification and/or correction are required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. In view of the 112 rejection, claims 1 thru 4 are rejected under 35 U.S.C. 102(b) as being anticipated by McClure 6,037,792. McClure discloses (see, for example, FIG. 1) burn-in stress test mode circuit (semiconductor device) 10 comprising MOS transistors (plurality of gates) 30, 32, 34, 36, 38, 40, 50; MOS transistors (multiplexer) 22, 24, 26, 28; and burn-in flag (thermal sensing circuitry) 54. Also, see claim 16.

Regarding claim 3, see, for example, FIG. 2 wherein McClure discloses fuses 21a, 21b.

Regarding claim 4, see, for example, FIG. 2 wherein McClure discloses burn-in mode signal 58 indicating the state of burn-in.
